

Ask Django

여러분의 파이썬/장고 페이스메이커가 되겠습니다.
EP 5. 위젯 만들기 (DatePicker 위젯)

전체 코드

blog/forms.py

```
from .widgets import DatePickerWidget
```

```
class PostForm(forms.ModelForm):
```

```
    class Meta:
```

```
        model = Post
```

```
        fields = '__all__'
```

```
        widgets = {
```

```
            'country': AutoCompleteWidget ajax_url=reverse_lazy('country_list')),
```

```
            'rating': RateitjsWidget,
```

```
            'when': DatePickerWidget,
```

```
        }
```

blog/widgets.py

jquery ui 의 **DatePicker** 활용

jquery ui cdn 상에 다양한 **theme** 확인

```
class DatePickerWidget(forms.DateInput):
    template_name = 'widgets/picker_date.html'

class Media:
    css = {
        'all': [
            '//code.jquery.com/ui/1.12.1/themes/smoothness/jquery-ui.css',
        ],
    }
    js = [
        '//code.jquery.com/jquery-2.2.4.min.js',
        '//code.jquery.com/ui/1.12.1/jquery-ui.min.js',
    ]
```

blog/templates/widgets/picker_date.html

```
{% include "django/forms/widgets/date.html" %}
```

```
<script>
$(function() {
    $('#{{ widget.attrs.id }}').datepicker({
        dateFormat: 'yy-mm-dd'
    });
});
</script>
```

*Life is short,
use Python3/Django.*
